🐙 gervisram

Education

University of Colorado Sept 2022 – May 2026
Bachelor of Science in Computer Science

- **Relevant Coursework:** Data Structures, Algorithms, Data Science, Software Development Methods, Machine Learning

Los Angeles Film School Sept 2020 – May 2022
Associates degree in Music Production

Experience

King Soopers - E-Commerce Clerk (Nov 2022 - Present)

- Process and prepare online orders for curbside pickup in a fast-paced retail environment. Responsibilities included accurately picking and packing items, ensuring order accuracy and maintaining inventory organization.
- Maintained high standards of efficiency and accuracy in order fulfillment, consistently meeting strict performance expectations.

Mobile App Developer - Harwood Museum of Art (Code in private repository - available upon request)

- Building a cross-platform art exhibit guide app. The application includes interactive mapping, road-trip route functionality, and dynamically loaded artist/artwork data.
- Tools Used: React Native, Expo, Map APIs, Git/Github

Projects

2D Role-Playing Game (Pygames) github.com/pygamesRPG 

- Implemented object-oriented architecture for characters, environments, and combat mechanics.
- Optimized code in order to ensure scalability and maintainability.
- Tools Used: Python

Gurber AI github.com/gurber-ai 

- Built a fully local and offline macOS desktop app that indexes personal documents and uses them as context. Gurber AI can answer general questions and questions about all of the files being "watched" using RAG (Retrieval-Augmented Generation). Supported files: .pdf, .md, .txt, .docx, .mp3, .mp4, .m4a, .wav
- Tools Used: Python/FastAPI, ChromaDB, Ollama (Qwen3 8B), Tauri/Rust, ClaudeCode

Fake News Detector - ML Model colab.google.com 

- Collaborated with a partner to perform feature engineering and train supervised machine learning models for fake news article detection.
- Tools Used: Python (SciPy, NumPy, Pandas)

NCAA March Madness Bracket Predictor - ML Model colab.google.com 

- Found, cleaned, and transformed data on college basketball teams from 2013-2025 to train a machine learning model to predict any given matchup. I also added a feature to simulate and print each each matchup in a given region to fully fill out the predicted bracket.
- Tools Used: Python (SciPy, NumPy, Pandas)
